# ka c

**Lessons from a decade of Kafka consulting** 

**Client Cannot** 

Communicate

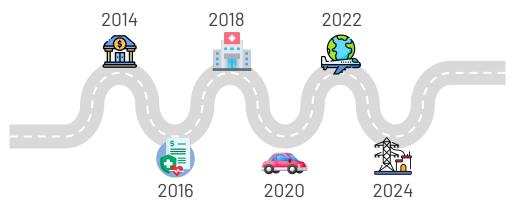

**/thoughtworks** 

Simple **Machines** 

"Happy" Pharrell Williams

**Staying happy** 

It has a steep learning curve ...

#### Learning - onboard quickly

In mid-size / larger-sized companies don't be the blocker for upskilling others

- An easy onboarding experience
- A sandbox environment for folks to try without constraints

#### **Learning - keep current**

#### To stay happy **stay Kafka informed** ...

- Big surface area
- Keeps growing need to keep learning
- SGreat resources

"Thinking Out Loud" Ed Sheeran

Thinking out loud

·

Seeing the same mistakes across different teams

Apache Kafka 0.9

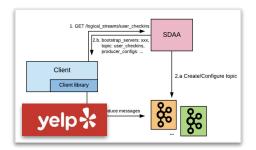

Yelp

#### Wix

```
test-event-proto:
owner:
team: data-platform-team
slack: #ask-data
description: a test topic for proto messages
categories:

coinbase
events, pubsub, test, internal }
failover | roundrobin | replicate
```

#### Coinbase

Producer

Kafka

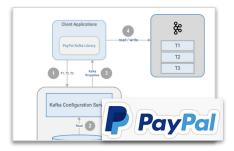

CLOUDFLARE

Schema Registry

Validation error

Validation error

#### Cloudflare

**Paypal** 

#### Learning - sensible defaults

### Codifying best practices and principles into pre-defined approaches for common tasks

- Wrap the producer and consumer SDK
- W Hide the Kafka boilerplate
- Broker location, serialization, key strategy, other properties

"Sorry" - Justin Bieber

Sorry

Mistakes were made

Apache Kafka 0.10

Kafka is flexible enough to solve just about any problem!

Kafka is flexible enough to solve just about <u>any</u> problem?

### YOUR SCIENTISTS WERE SO PREOCCUPIED WITH WHETHER OR NOT THEY COULD...

Not everything should be an Apache Kafka project

THEY DIDN'T STOP TO THINK IF THEY SHOULD.

#### Learning - when not to use Kafka

- You don't want to use Kafka for
- Unreliable networks
- Connectivity to 1000's of client applications
- Replacing a database or huge payloads
- OV driven development

Schemas are cool

How do we managing these shapes?

Apache Kafka 0.11

### Decomposition

Moving from monolith to decoupled microservices with clear responsibilities

"Schemas are the APIs used by event-driven service ...so a publisher and subscriber need to agree on exactly how a message is formatted."

(O'Reilly)

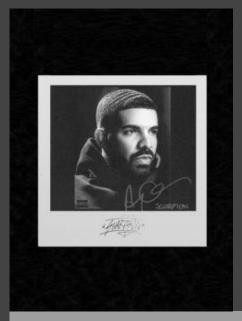

#### Learning to love schemas

- Schema registry
- Schema management configuration repo
- Schema ownership (and accountability)
- Schema flexibility (and evolvability)
- Choose the right appropriate compatibility mode

#### **Centralised Kafka**

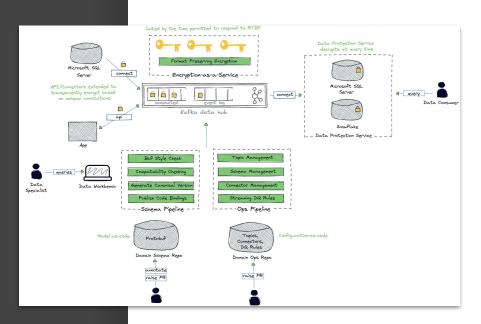

"God's Plan" Drake

Working with the <del>god</del> "central platform team"

Introducing Apache Kafka as an enterprise backbone is not without its challenges

Saxo Bank's Best Practices for a Distributed Architecture

#### **Learning - centralised team**

Balance developers **and** platform concerns

- **Establish appropriate abstractions**
- Non negotiables security & access
- **Enforcing best practices by default**
- Serialization, monitoring, encryption
  - if it's important bake it in from day one

#### **Save your tears**

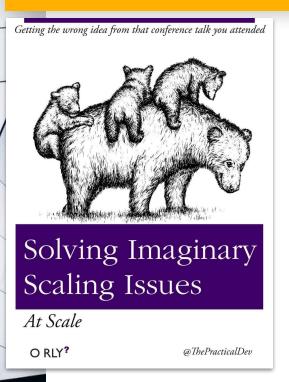

"Save Your Tears"
The Weeknd and Ariana Grande

Apache Kafka 2.8

Running Kafka yourself can get pretty time consuming depending how big you scale.

#### **Learning - Building it yourself?**

On't run Apache Kafka yourself \*

\* unless you're very small, or very big!

#### **Takeaways - greatest hits**

University Love schemas and manage like code

Balance developers and platform concerns

📚 Keep learning

### And now?

## beautiful things

"Beautiful Things" by Benson Boon

Apache Kafka 3.9

#### **Beautiful Things**

The beauty of Apache Kafka lies in its ability to unify data processing, integration, and real-time analytics within a single platform.

### Thanks!
